

# Antura Projects for Scaled Agile & SAFe

Digital transformation, innovation and disruptive technology forces organizations to become more agile – to respond faster to customer expectations, volatile market conditions, and emerging technologies.

For many of Antura's customers this requires agility at scale. Antura Projects is a complete PPM tool supporting different methodologies, from lean and agile at scale to waterfall and hybrid delivery.

The most recognized framework available to help organizations implement agile at scale is SAFe. Other frameworks are LeSS and DAD (Disciplined Agile Delivery). These frameworks provide guidance towards best practice in scaling agile delivery. However, each organization has their own set of challenges, so it is important to approach agile at scale in a way that allows the organization to adapt to its specific needs.

Scaled agile practices are designed to help organizations navigate complexity in as lean a way as possible. Agile at scale requires continuous planning and portfolio management to maximize customer value from investments.

## Portfolio and program level

Antura Projects enables your organization's alignment around strategic themes and supports agile delivery at scale. Whether your portfolio consists of products, agile delivery teams, value streams or projects, Antura Projects allows you to track your organization's progress towards strategic outcomes.

As you prepare for the next program increment, Antura Projects allows you to manage your idea backlog and prioritize increment features, ideas and other initiatives. As you do this, you align these program increments to your strategic themes to ensure optimal value delivery.

Using the budgeting, forecasting and simulation functionality, Antura Projects helps you find the optimal lean budget for your value streams. As you track enterprise wide benefits from your agile value streams, Antura Projects offers automatic roll-up to the portfolio level.

## Team level

We understand that teams need to work in a highly integrated, dev-ops enabled eco system of tools that allow them to focus on day-to-day planning and CI/CD delivery. That is why we have integrated with Jira to automatically extract necessary tracking data into Antura Projects to enable seamless portfolio governance without unnecessary delay in the delivery process.

We support teams with resource planning, time sheets and simulation of resource workload. We also offer Kanban boards, which are a great way for individual teams to visualize the flow of work and keep track of work in progress.

## What can Antura do for you?

For 20 years Antura Projects has been an instrumental part of many organizations' success in providing value to their customers. New functions are constantly added to support new ways of working. We asked Peter Bergevald, Consulting Director at Antura, to talk about how some of Antura's customers use Antura Projects to support their agile and lean organizations.

"Often our customers have one or many agile teams, i.e. software development. Still these organizations have the strong need for portfolio management, follow-up, visualize prioritizations and report status in a more traditional way. Many organizations are hybrids methodology wise."

"A large part of the Antura customer base works agile, partly or fully. Antura professional service organization has in multiple cases supported our customer to embed agile methodologies into Antura Projects.

Often our customers have one or many agile teams, i.e. software development. They work in sprints, they work with backlogs, they work with value streams. They might use tools like Jira and Confluence to

support their agile work. Still these organizations have the strong need for portfolio management, follow-up, visualize prioritizations and report status in a more traditional way. Many organizations are hybrids methodology wise.

With the strengths of the Kanban board in Antura and the Jira plugin, the agile teams can continue to work according to the most efficient methodology for them. At the same time they can manage their overall

objects and portfolios and make sure the total outcome is optimized to meet their organizations strategic goals."

Peter Bergevald,  
Consulting Director, Antura Group
